Increased immunisation
The national immunisation target is 95 percent of eight-month-olds will have their primary course of immunisation (six weeks, three months and five months immunisation events) on time. This quarterly progress includes children who turned eight months between July and September 2015, are enrolled in a PHO and who were fully immunised at that stage. Consequently, the All PHOs percentage above will be different to the All DHBs percentage.

This target has a new definition shifting the focus to the entire enrolled population of people who smoke and not only those seen in primary care.

Better Help for Smokers to Quit Using Technical Advisory Services (TAS) Data
