</thead>
<tbody>
<tr>
<td>Cysticercosis</td>
</tr>
<tr>
<td>Decompression sickness</td>
</tr>
<tr>
<td>Lead absorption equal to or in excess of 0.48 µmol/l (10µg/dl)**</td>
</tr>
<tr>
<td>Poisoning arising from chemical contamination of the environment</td>
</tr>
<tr>
<td>Taeniasis</td>
</tr>
<tr>
<td>Trichinosis</td>
</tr>
</tbody>
</table>
During times of increased incidence health practitioners may be requested to report, with informed consent, to their local medical officer of health cases of communicable diseases not on this list.

Not every case of acute gastroenteritis is necessarily notifiable, only those where there is a suspected common source or from a person in a high risk category (for example, a food handler, an early childhood service worker) or single cases of chemical, bacterial, or toxic food poisoning such as botulism, toxic shellfish poisoning (any type) and disease caused by verotoxin or Shiga toxin-producing *Escherichia coli*.

Where occupational exposure is suspected, please also notify the agency responsible for workplace health and safety through the notifiable occupational diseases system.
