

Critical Medical Supplies Monitoring Group (CMSMG) dashboard as of
1 April 2022

Item/Category	Status	Contract holder	Update
PPE	Centrally managed	COVID-19	PPE supply remains in good shape. Demand for faceshields has dropped in recent days, and additional volume has arrived in country taking some pressure off this line. N95s demand has also dropped and sufficient supply remains based on existing forecasting.
Haemodialysis products	Watching brief	Fresenius - Pharmac	Met with Fresenius late last week. At least 2 weeks stock holding on most line items, and good forward supply arriving in country. Fresenius will air freight from Australia if needed
Syringes	Watching brief	BD - Pharmac	In reasonable shape currently and don't appear to be receiving concerns from DHBs. MoH contingency supply secured on many potentially constrained lines.
Blunt needles	Can be removed from monitoring	NZMS BD Cardinal B.Braun	Issues are resolved. Can be removed from monitoring
Respiratory equipment and consumables	Centrally managed	Phillips ResMed - Pharmac	Philips V60 and V60+ recall has been announced. Looking at what alternatives we can deploy. Looking at potentially securing more Airvo 3 Acutes potentially, however confirming that the current software issue with these units is resolved first.
Pulse Oximeters	Centrally managed	NZHPL	There is sufficient supply to support the outbreak. Volume has been much lower than forecast. Need for DHBs to ensure that their returns processes are in place and working.
Blood tubes	Watching brief	BD	Appear to be largely fine although still some tight supply with citrate tubes
Sharps bins	Watching brief	BD	A number of sizes have arrived and been allocated out to DHBs, particularly the 72L size. DHBs should get in touch with NZHPL regarding any specific issues they are having
Enteral feeding	Actively monitored	Nutricia - Pharmac	Tracking okay currently. Nutricia still have couple of tight items, but these appear to be coming right. Abbott Ensure is a current issue, but Nutricia 1.5 kilocal oral feed could be an alternative. DHBs should get in touch with Pharmac for any specific issues they are encountering
Point of care testing	Centrally managed	MoH	In hand. RATs supply is secure. Rapid PCR has evened out as a result of the lower demand for PCR generally. DHBs should get in touch with the MoH regarding any specific issues they are encountering with Rapid PCR consumables
Canulas	Watching brief	BD	Appears to be largely in hand. De-escalate to watching brief. DHBs should alert Pharmac to any issues that they are encountering
Wound Care	Watching brief	Smith and Nephew - Pharmac	Still intermittent issues across the product range. Continue to monitor.
IV Fluids	Actively monitored	Baxter - Pharmac	Baxters are struggling to de-man containers due to COVID absences. The Ministry has facilitated exemptions for 5 Baxters staff to come from Australia to support the de-maning process. There remain 9-10 critical lines, including various sizes of saline, where Baxter have no buffer stock and product is being dispatched as soon as it is de-maned. Many DHBs are running very tight supply (1-2 days) on these lines. Pharmac and the Ministry are receiving daily updates from Baxters and meeting regularly with them. There are issues regarding communication, transparency, and information flow which are being worked on with Baxters.
Endoscopy Sterilization Fluid Supply	Can be removed from monitoring		Resolved. Can be removed
