

Summary of COVID-19 Disease Indicators

For the reporting period 12 February to 25 February 2021

Report date: 02/03/2021

Key:

 Performance above target	 Performance improved or the same compared to the previous reporting period
 Performance below target	 Performance lower compared to the previous reporting period

Summary of community cases

Number of cases for this reporting period and cumulative number of cases since 11 August 2020.

Reporting period	Cumulative
11	214

This reporting period involves the February South Auckland community cases and associated close contacts. The indicators **S001**, **S002**, **C001** are low due to the delayed identification of initial cases following symptom onset. While **S001**, **S002**, **C001** are below target, **S003** shows that once a case has been identified the system performance is above target (80% by 48-72 hours) at 98 percent for this reporting period.

These metrics do not include customers who are casual plus contacts that have been managed as close contacts from two exposures of interest associated with Case J (Kmart and Dark Vapes). These contacts identified themselves by calling Healthline and at that time were provided advice on isolation and testing requirements. This contact date is not recorded in the National Contact Tracing Solution and therefore cannot be accurately represented by these metrics.

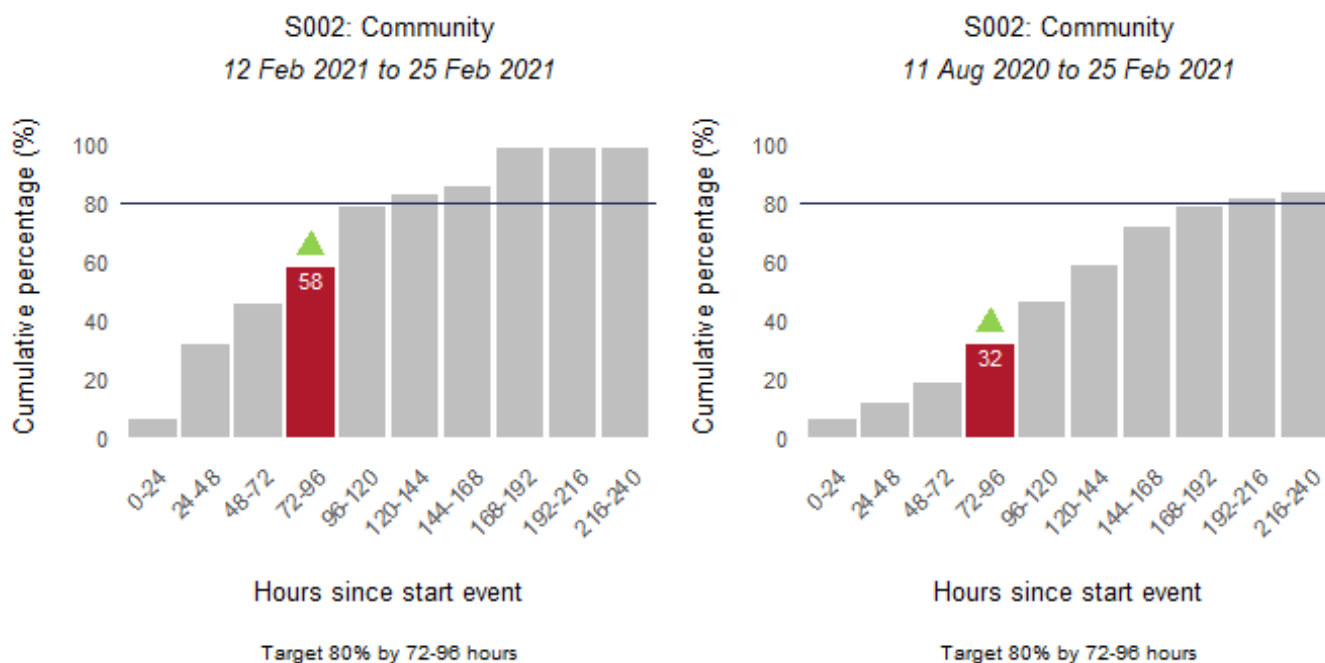

System level indicators

These indicators provide a view of the end-to-end collective actions of the wider health system response (indicators are prefixed with an S#).

S001 - Time from exposure to contact isolation / quarantine

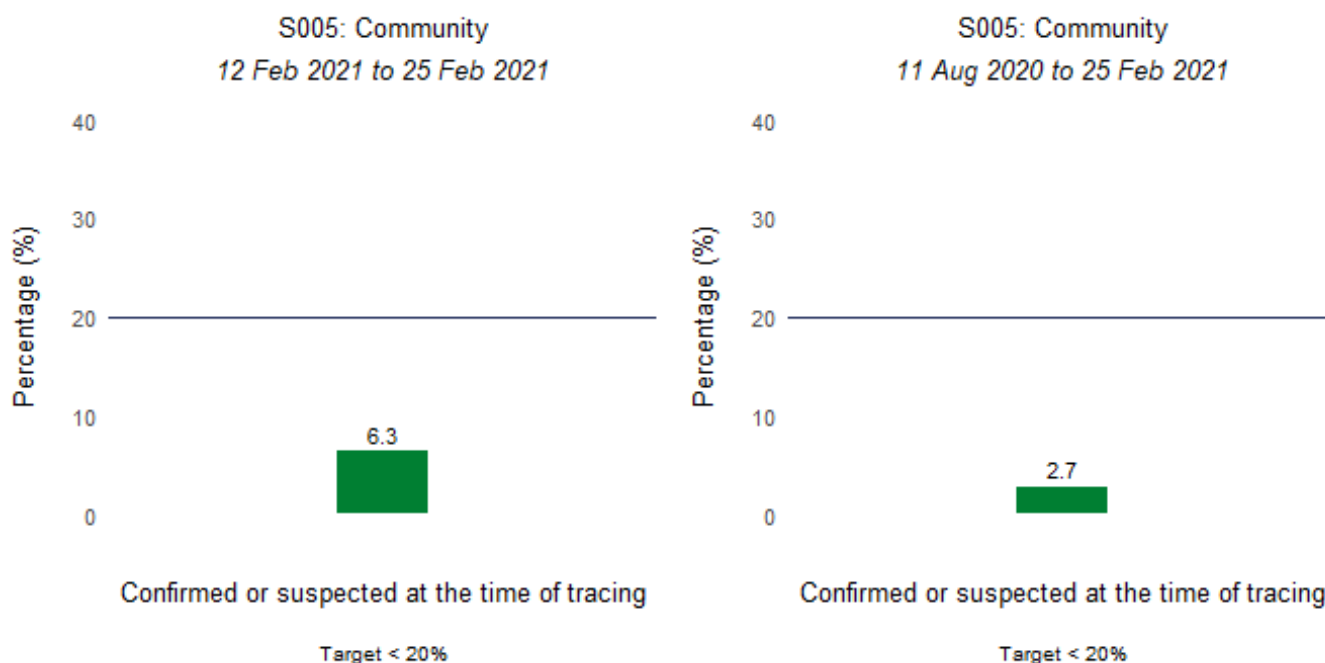

S002 - Time from case first symptom to contact isolation / quarantine

S003 - Time from test sample taken to close contact isolation / quarantine

S005 - Proportion of close contacts with confirmed or suspected COVID-19 at the time of tracing

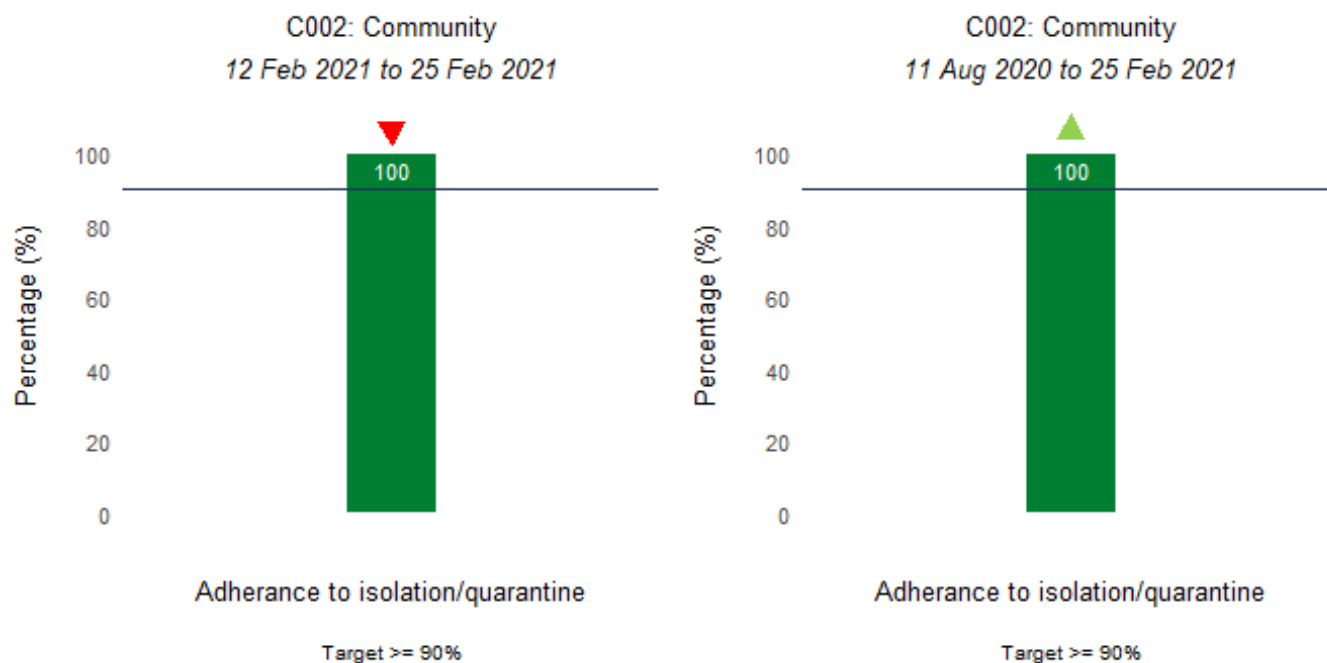

Community-level indicators

These indicators focus on community behaviours and the impact of communication, education and societal attitudes (indicators are prefixed with a C#). For indicator **C001** the time period measured is from the symptom onset date as recorded in EpiSurv to the date/time the laboratory received the sample. The time between a sample taken and the receipt date/time of the sample at the laboratory, including transport time, will affect this indicator. Indicator **C002** reports on self-reported compliance at the end of a case or contact's journey. This indicator is flagged for review.

C001 - Time from first symptom to test sample taken for positive cases

C002 - Proportion of cases and contacts who adhere to isolation and quarantine

Laboratory sector indicator

This indicator provides insight into the effectiveness of testing facilities and programmes (indicator is prefixed with an L#). The time period measured is from the time the laboratory received the sample to notification of a positive result in EpiSurv. For this reporting period, 100 percent of positive results were notified by hour 34. Small volumes during the reporting period distort this indicator metric.

L001 - Time from test sample taken to notification of positive result

Public health sector indicators

These indicators provide a national overview of contact tracing as well as case and close contact management by public health units (PHUs) and the National Investigation and Tracing Centre (indicators are prefixed with a P#). For this reporting period, the **P005** metric represents 1774 successful follow-ups out of 1985 scheduled calls.

P001 - Time from notification to case interview

P002 - Time from case notification to isolation / quarantine of contact

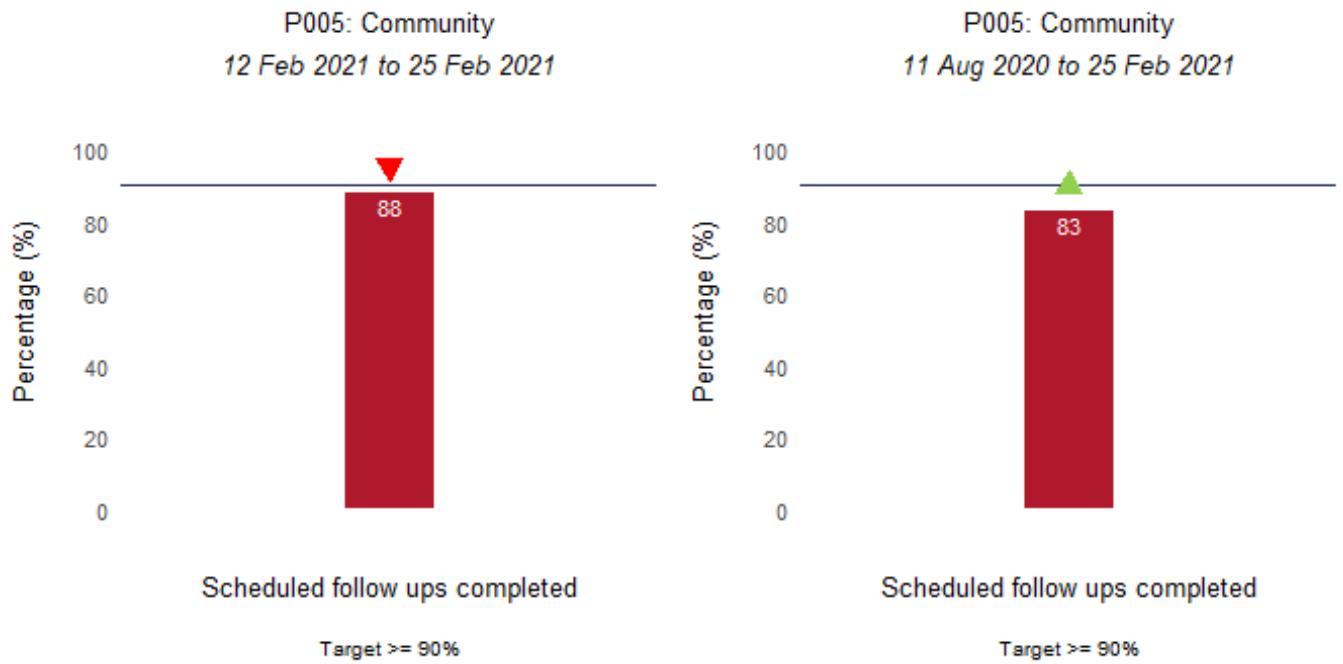

P003 - Time from close contact identification to isolated / quarantined

P004 - Proportion of contacts traced in 48 hours

P005 - Regular monitoring and follow up of cases and contacts completed

Appendix: Summary of MIQ border and international indicators

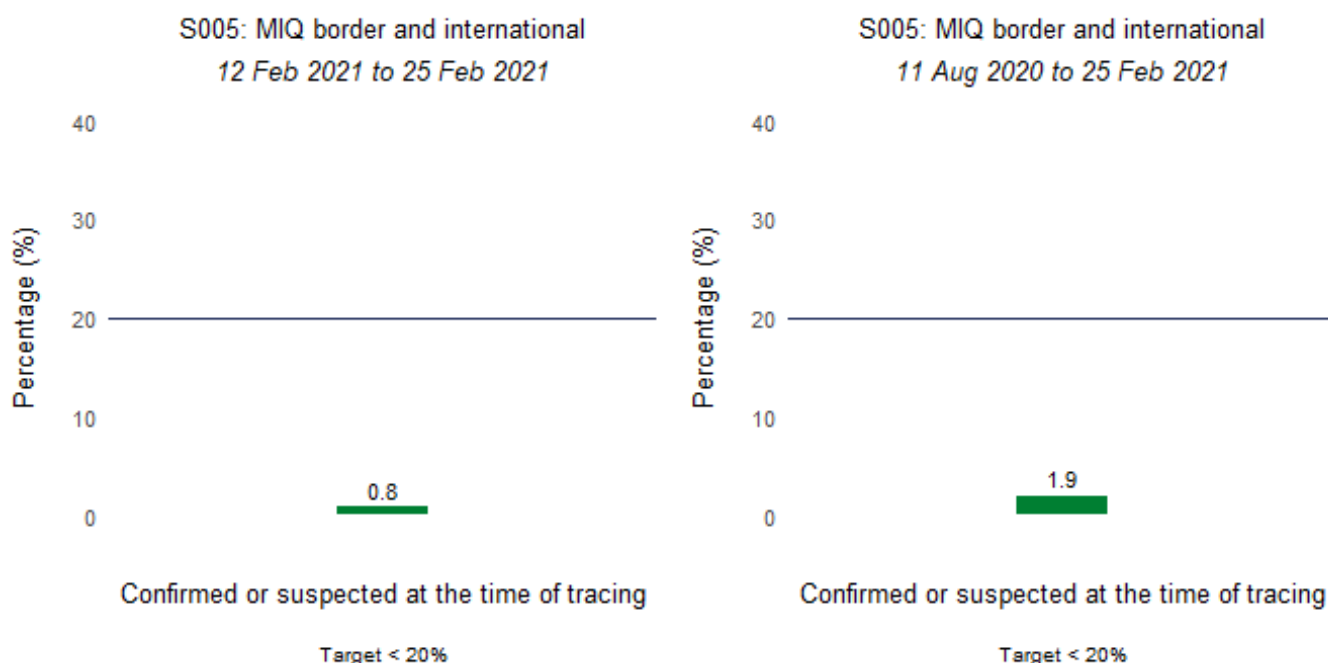

This section presents the indicators for Border Managed Isolation and Quarantine (MIQ) and International cases. Returnees' exposure is arbitrarily set to the day of arrival in New Zealand. They are placed into MIQ upon arrival and are tested on day 0/1 (except for returnees from excluded countries - Australia, Antarctica, and some Pacific Islands) and on approximately day 3 and day 12.

Summary of MIQ border and international cases

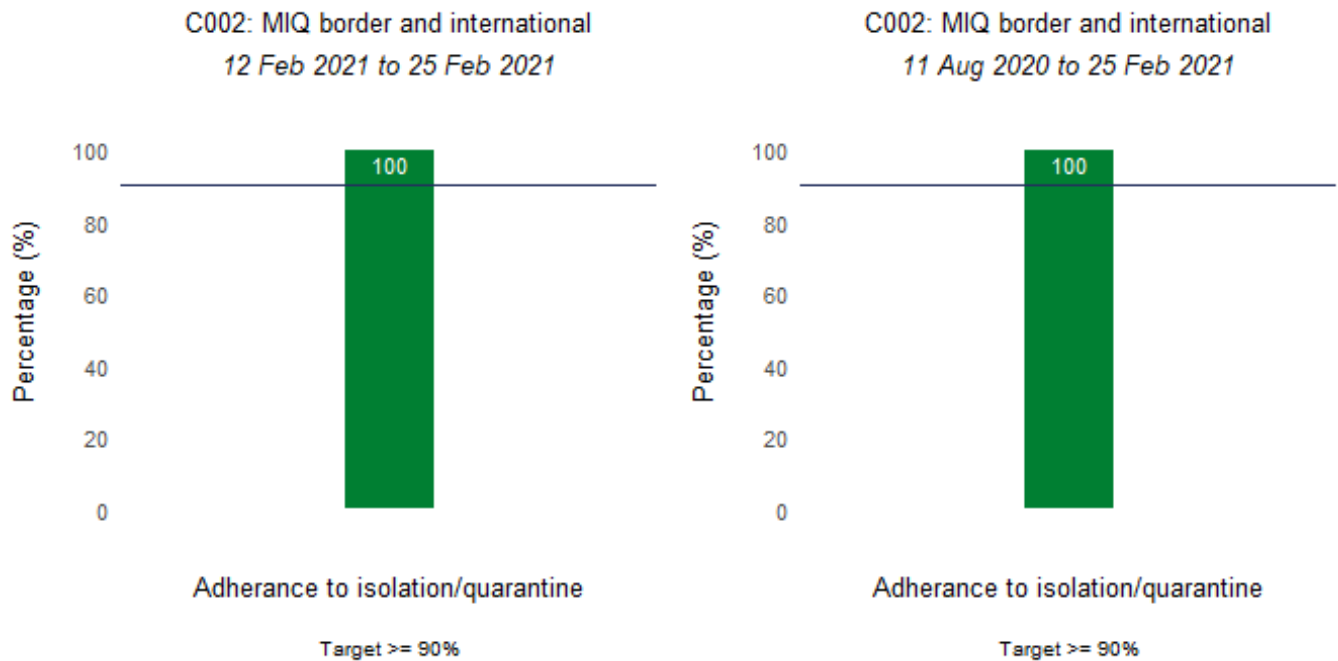

Number of cases for this reporting period and cumulative number of cases since 11 August 2020.

Reporting period	Cumulative
32	558

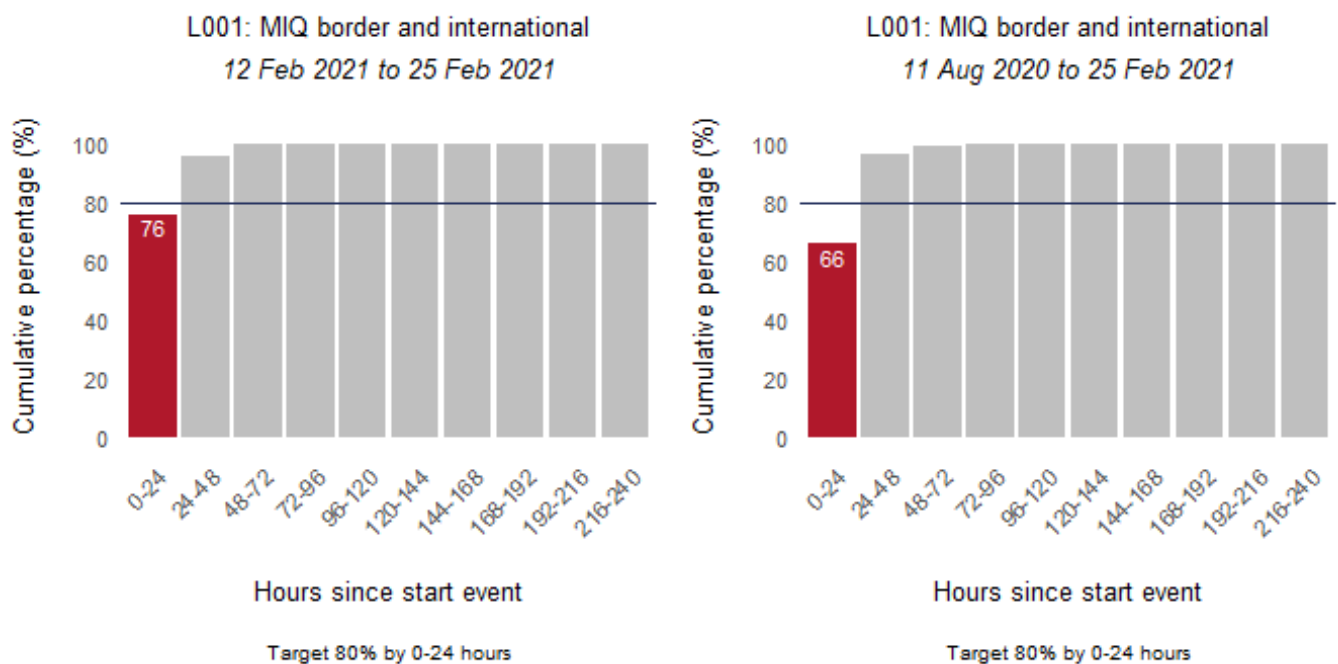

S005 - Proportion of close contacts with confirmed or suspected COVID-19 at the time of tracing

C002 - Proportion of cases and contacts who adhere to isolation and quarantine

L001 - Time from test sample taken to notification of positive result

P001 - Time from notification to case interview

P004 - Proportion of contacts traced in 48 hours
