

# When can people get the COVID-19 vaccine?

For healthcare providers managing MMR and influenza vaccinations around COVID-19.

## COVID-19 vaccination is the priority.

\*Ideally, there should be a gap of 2 weeks or more between the influenza and COVID-19 vaccinations.

Allow a gap of 4 weeks or more after MMR before giving the COVID-19 vaccine, and a gap of 2 weeks or more when giving MMR after the second dose of the COVID-19 vaccine.

Please note that there are no clinical safety concerns should the gap between vaccines be less than the recommendations above.

The MMR and influenza vaccines can be given at the same time.

You can find a list of underlying health conditions at [health.govt.nz/covid-vaccine](https://health.govt.nz/covid-vaccine)
