

How is My DHB performing?

2015/16 QUARTER ONE (JULY-SEPTEMBER) RESULTS

www.health.govt.nz/healthtargets

This target definition changed to provide more consistent recognition of surgical delivery.

This target has a new definition shifting the focus to the entire enrolled population of people who smoke and not only those seen in primary care.

Shorter stays in

Emergency Departments

Improved access to

Elective Surgery

Faster

Cancer Treatment

Increased

Immunisation

Better help for

Smokers to Quit

More

Heart and Diabetes Checks

Shorter stays in Emergency Departments
The target is 95 percent of patients will be admitted, discharged, or transferred from an Emergency Department (ED) within six hours. The target is a measure of the efficiency of flow of acute (urgent) patients through public hospitals, and home again.

Improved access to elective surgery
The target is an increase in the volume of elective surgery by at least 4000 discharges per year. DHBs planned to deliver 47,878 discharges for the year to date, and have delivered 1,852 more. The new revised target definition includes elective and arranged in-patient surgical discharges, regardless of whether they are discharged from a surgical or non-surgical specialty (excluding maternity).

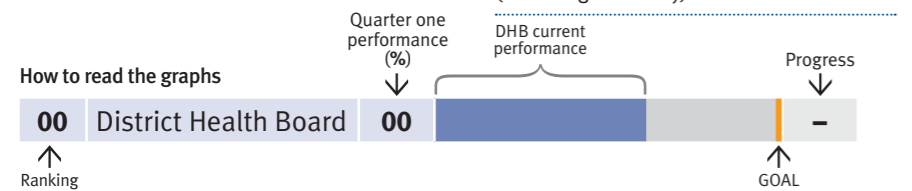

Faster cancer treatment
The target is 85 percent of patients receive their first cancer treatment (or other management) within 62 days of being referred with a high suspicion of cancer and a need to be seen within two weeks by July 2016, increasing to 90 percent by June 2017. Results cover those patients who received their first cancer treatment between April and September 2015.

Increased immunisation
The national immunisation target is 95 percent of eight-month-olds have their primary course of immunisation at six weeks, three months and five months on time. This quarterly progress result includes children who turned eight-months between July and September 2015 and who were fully immunised at that stage.

Better help for smokers to quit
The target is 90 percent of PHO enrolled patients who smoke have been offered help to quit smoking by a health care practitioner in the last 15 months. From quarter one the hospital target is now only reported on the Ministry's website, along with the maternity target results www.health.govt.nz/healthtargets

More heart and diabetes checks
This target is 90 percent of the eligible population will have had their cardiovascular risk assessed in the last five years.

* As the target definition has changed, there is no comparison to previous results.

Health target results are sourced from individual DHB reports, national collections systems and information provided by primary care organisations.

This information should be read in conjunction with the details on the website www.health.govt.nz/healthtargets
