

How is my DHB performing?

2011/12 QUARTER THREE (JANUARY-MARCH) RESULTS www.health.govt.nz/healthtargets

This is the first time the new target is being reported. The results are provisional while we confirm the data.

Shorter stays in
Emergency Departments

Improved access to
Elective Surgery

Shorter waits for
Cancer Treatment

Increased
Immunisation

Better help for
Smokers to Quit

More
Heart and Diabetes Checks

Ranking	District Health Board	Quarter three performance	95%	Change from previous quarter

Shorter stays in Emergency Departments
The target is 95 percent of patients will be admitted, discharged, or transferred from an Emergency Department (ED) within six hours. The target is a measure of the efficiency of flow of acute (urgent) patients through public hospitals, and home again.

Improved access to elective surgery
The target is an increase in the volume of elective surgery by an average of 4,000 discharges per year.
** DHBs planned to deliver 106,783 discharges year to date, and have delivered 5,011 more.*

Shorter waits for cancer treatment
The target is all patients, ready-for-treatment, wait less than four weeks for radiotherapy. Six regional oncology centres provide radiation oncology services. These centres are in Auckland, Hamilton, Palmerston North, Wellington, Christchurch and Dunedin.

Increased immunisation
The national immunisation target is 95 percent of two year olds will be fully immunised by July 2012.
This quarterly progress result includes children who turned two years between January and March 2012 and who were fully immunised at that stage.

Better help for smokers to quit
The target is that 95 percent of hospitalised smokers will be provided with advice and help to quit by July 2012. The data covers patients presenting to Emergency Departments, day stay and other hospital based interventions.

More heart and diabetes checks
The target is that, by July 2012, 60 percent of the eligible population will have had their cardiovascular risk assessed in the last five years. This target will increase in stages each year to 90 percent by July 2014. Because this is a new health target, no comparison can be made between the results this quarter and data from the previous quarter. Results for the diabetes indicators from the previous CVD/Diabetes target can be found on www.health.govt.nz/healthtargets
