Shorter stays in Emergency Departments

The target is 95 percent of patients will be admitted, discharged, or transferred from an Emergency Department (ED) within six hours. The target is a measure of the efficiency of flow of acute (urgent) patients through public hospitals, and home again.

Improved access to elective surgery

The target is an increase in the volume of elective surgery by an average of 4000 discharges per year. DHBs planned to deliver 138,026 discharges for the year to date, and have delivered 7,992 more. The new revised target definition includes elective and arranged in-patient surgical discharges, regardless of whether they are discharged from a surgical or non-surgical specialty (excluding maternity).

Faster cancer treatment

The target is 85 percent of patients receive their first cancer treatment (or other management) within 62 days of being referred with a high suspicion of cancer and a need to be seen within two weeks by July 2016, increasing to 90 percent by June 2017. Results cover those patients who received their first cancer treatment between 1 October 2015 and 31 March 2016.

Increased immunisation

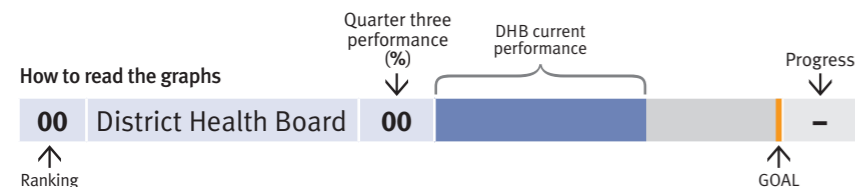

The national immunisation target is 95 percent of eight-month-olds have their primary course of immunisation at six weeks, three months and five months on time. This quarterly progress result includes children who turned eight-months between January and March 2016 and who were fully immunised at that stage.

Better help for smokers to quit

The target is 90 percent of PHO enrolled patients who smoke have been offered help to quit smoking by a health care practitioner in the last 15 months. From quarter one the hospital target is now only reported on the Ministry's website, along with the maternity target results. www.health.govt.nz/healthtargets

More heart and diabetes checks

This target is 90 percent of the eligible population will have had their cardiovascular risk assessed in the last five years.

Health target results are sourced from individual DHB reports, national collections systems and information provided by primary care organisations.

This information should be read in conjunction with the details on the website www.health.govt.nz/healthtargets
