Gestational Trophoblastic Disease - Patient Record

Patient Sticker

Lead Clinician: _______________________

Diagnosis

- Partial Mole
- Complete Mole

Date of Diagnosis (evacuation): _______________________

Date of Multidisciplinary Meeting: _______________________

Checklist

- Chest X Ray result
  - Normal
  - Abnormal: _______________________

- Registered
  - Local
  - Central

- Contraception
  - Discussed

- Written information
  - Given
  - Offered

- Counselling
  - Offered

- tHCG taken

Comments: _______________________

Checklist filled in (Name, Signature, Date)

Pre-evacuation tHCG

Date: _______________________

Post-evacuation tHCG

Date: _______________________

Weekly test (till negative x2)

- Refer to Medical Oncology at any time if:
  - Plateau of tHCG lasts for 4 measurements over a period of 3 weeks or longer; days 1, 7, 14, 21 (+/- 10%)
  - Rise of hCG on three consecutive weekly measurements, over a period of two weeks or longer, days 1, 7, 14 (> 10%)
  - hCG >20,000 >4 weeks after evacuation

- Duration of Follow up (IF MDM occurred, otherwise follow Complete Mole schedule)
  - Partial mole ...............................................................stop as soon as tHCG negative
  - Complete mole .........................................................6 months after normalisation
  - any mole with a multiple pregnancy ................................monthly for 12 months after normalisation
  - If tHCG has NOT converted to normal within 56 days (8weeks) ..........................monthly for 12 months after normalisation
